Improving Treatment Together Project: Background and Rationale

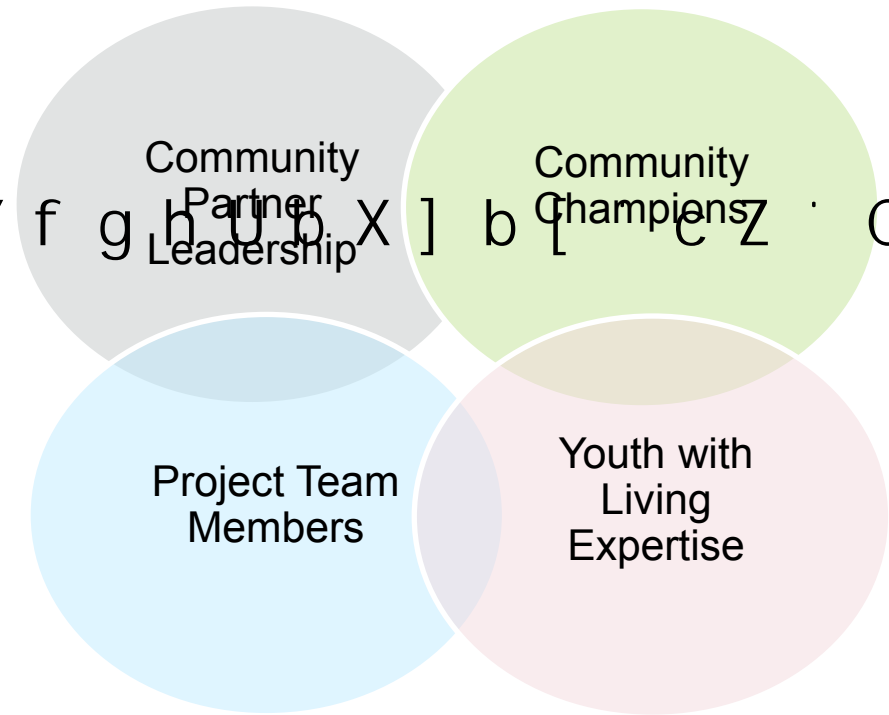

- i Opioid agonist treatment (OAT) is an evidence-based option to treat opioid use disorder (OUD)
- i Youth (16- 24 years) do not receive the same quality of OAT as adults do
- i Experts are calling for widespread implementation of youth-centred interventions.
- i The Improving Treatment Together (ITT) Project aims to improve the experiences and outcomes of opioid treatment for youth, their families and service providers.

Content Development: Community Engagement and Co-design

Step-by-Step: A Youth Informed Guide to Opioid Agonist Treatment

aims to
the process of starting OAT and daily
treatment access, so they can make
more informed decisions about this
treatment.
