Template: Environmental Scan

Asset mapping helps a community to understand its services. By looking at the services that are currently offered and highlighting any external factors that might be impacting services, such as the COVID-19 pandemic, gaps in services will be illuminated.

This template supports collecting information about existing services, who offers them and which age groups they serve. You could also use flip charts, dry erase boards or virtual mapping tools like Miro to do this brainstorming — whatever works best for your group. The types of services may vary from one community to another.

This information will support your community in many different ways such as creating an invitation list for asset mapping workshops.

Type of services	Name of organization that delivers the services	Primary contact (name, role, phone or email)	Brief description of the services provided	Age group served
Mental Health				
Substance Use				
Physical and Sexual Health				
Peer Support				
Social Services				
Other Wellness Services
