

How does Foundry use data to evolve services alongside youth?

Who was the study about?

Youth (ages 12-24) who accessed Foundry services between 2018-2021:

What was done?

Researchers used data from a central platform called Toolbox.

They looked at:

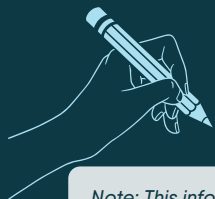

- Who is coming to Foundry and who isn't?
- What services are used?
- Any changes during COVID-19?

Based on:

- Optional surveys completed by youth who visited Foundry
- Forms completed by service providers

What did Foundry learn?

Note: This infographic focuses on overall themes and demographic data from the study, as well as Foundry's response to these data.

- 1 A majority of youth accessing services identified as female.
- 2 Fewer younger youth (ages 12-14) are coming to Foundry than older youth.
- 3 Foundry supports youth of diverse ages, genders and ethnicities. Some groups are represented more than others.

There is a need for:

- Targeted outreach and campaigns for **boys and men**
- Services and supports specific for **youth**
- Culturally safe and responsive services for **diverse youth**

What did Foundry do in response?

- Grew and **transformed virtual services** based on evolving needs & lessons from COVID-19.
- Conducted **anti-racism assessments** to support diverse youth accessing Foundry.
- Dedicated **research** to learning about what mental health means for youth ages 12-15
- Developed **We Are Here For You**: a virtual health campaign for boys and men.

What do youth & family want you to know?

- The needs of youth are **continuously evolving**, and youth services need to adapt alongside.
- Routinely collecting and analyzing **youth-centred data** (like in this study) is key to improving services.
- Learning about who is **not** accessing services helps us build strategies to reach a wider range of youth.
